

## Peeler:WBP01

### *Effective and Efficient*

With the development of sausage production, more and more sausage manufacturers use cellulose casing to produce sausages.

To meet the demand for peeling machines, we has designed and produced Sausage Peelers. This kind of sausage peeler works at a speed of 3 meters per second. And it provides two peeling options—“steam peeling” and “soaking peeling”, in case there is no convenient steam source in factories. The blades are specially designed to have a longer life and work more efficiently. Steady operation with low failure rate is another characteristic of this machine.

### **Advantages:**

- ◆ High speed.
- ◆ Good looking after peeling.
- ◆ Reasonable price.

### **Parameter:**

<b>Weight:</b>	315KG
<b>Portioning capacity:</b>	3 meters per second
<b>Caliber range:</b>	φ17-28 mm (possible for 13~32mm according to request)
<b>Length*Width*Height:</b>	1880mm*650mm*1300mm
<b>Power:</b>	3.7KW using 380V three phase
<b>Sausage Length:</b>	>=3.5cm

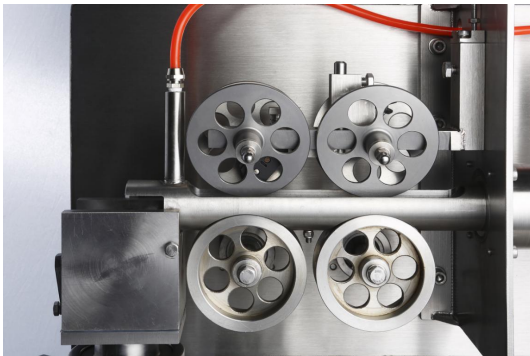

### ***Knife suite***

*If your sausages' length is less than 8cm, you have to buy another knife suite. It is good at peeling short sausages from 3.5cm to 8 cm, but we prefer the length above 5cm.*

The control panel

- easy to recognize and simple to operate.

The core piece for peeling

- made of complete stainless steel SUS304  
- robust, reliable and rapid

The sausage input

- Adapt for caliber from 13 to 32mm  
- reasonable length to ensure fast feeding and output  
- small human centered design to cut the first knot of sausage strings before peeling.
